POWERS[™] CONTROLS TH 192 HC Heating/Cooling Room Thermostat

 Direct and reverse acting models for heating and cooling modes. Separate adjustable temperature setpoint indicating dials for heating and cooling. Fahrenheit or Celsius setpoint dials. Highly sensitive bimetal thermostatic element. Individual field adjustable sensitivity with graduated scale. Operating mode automatically switches between heating and cooling on change of main air supply pressure. Integral field adjustable limit stops. Control pressure test port accessible without removing cover. Easily replaceable thermometer, setpoint dials, filters, and restrictor plate. Covers available for concealed or exposed thermometers and for either concealed, key, or exposed knob adjustment and setpoint indication. Standard plastic thermostat covers provide Desert Beige or white finish. 	Description	The TH 192 HC thermostats are proportional single output, dual setpoint, 2-pipe (high air capacity) sensor controllers. Each thermostat includes a wall mounting plate for installation in a variety of rough-in terminal boxes. Sensitive bimetals respond to temperature change to modulate control air through a flapper nozzle. Two setpoint dials are provided. When the supply air pressure changes from 18 to 25 psi (124 to 172 kPa), the thermostat automatically switches from the cooling to the heating setpoint, respectively. Air connections are made with 5/32" (4 mm) O.D. plastic tubing, directly to the thermostat chassis for retrofit applications or with plug-in adapters (provided with the TH 192 rough-in terminal box or optional accessories) which slide into the wall mounting plate.
 Separate adjustable temperature setpoint indicating dials for heating and cooling. Fahrenheit or Celsius setpoint dials. Highly sensitive bimetal thermostatic element.  Integral field adjustable limit stops. Control pressure test port accessible without removing cover. Easily replaceable thermometer, setpoint dials, filters, and restrictor plate. Covers available for concealed or exposed thermometers and for either concealed, key, or exposed knob adjustment and setpoint indication. Standard plastic thermostat covers provide Desert Beige or white finish. 		 Operating mode automatically switches between heating and cooling on change of main air supply pressure.
 Control pressure test port accessible without removing cover. Easily replaceable thermometer, setpoint dials, filters, and restrictor plate. Covers available for concealed or exposed thermometers and for either concealed, key, or exposed knob adjustment and setpoint indication. Standard plastic thermostat covers provide Desert Beige or white finish. 		Integral field adjustable limit stops.
 Easily replaceable thermometer, setpoint dials, filters, and restrictor plate. Covers available for concealed or exposed thermometers and for either concealed, key, or exposed knob adjustment and setpoint indication. Standard plastic thermostat covers provide Desert Beige or white finish. 		 Control pressure test port accessible without removing cover.
 Covers available for concealed or exposed thermometers and for either concealed, key, or exposed knob adjustment and setpoint indication. Standard plastic thermostat covers provide Desert Beige or white finish. 		Easily replaceable thermometer, setpoint dials, filters, and restrictor plate.
Standard plastic thermostat covers provide Desert Beige or white finish.		 Covers available for concealed or exposed thermometers and for either concealed, key, or exposed knob adjustment and setpoint indication.
		Standard plastic thermostat covers provide Desert Beige or white finish.

Optional Design	Fixed temperature limit stops meet government specifications.					
Features	• Metal covers available in standard configurations provide Desert Beige finish.					
	Competitor adapter mounting kits available.					
	• All thermostat chassis available with optional 1/2", large setpoint adjustment knobs.					
Application	TH 192 HC thermostats provide all-season temperature control for two-pipe hot water/chilled water heating and cooling applications (Figure 1) such as air conditioners, space heaters, and unit ventilators. Thermostats maintain energy management (maximum economy) and occupant comfort automatically as seasons change from the heating setpoint (65 to 68°F, 10 to 20°C) to the cooling setpoint (76 to 80°F, 24 to 27°C). TH 192 HC thermostats are available with covers that conceal or expose the setpoint adjustment dials.

Table 1.	TH 192 HC	Thermostat	Chassis	Part	Numbers

* This feature requires a key setpoint adjustment cover (or key type cover). See Table 2.

Covers

See Table 2 for product number and ordering information on TH 192 HC thermostat covers.

- 1. Is the setpoint adjustment exposed for customer adjustment or concealed to prevent alteration of setting?
- 2. Is the thermometer exposed or concealed?
- 3. Is the setpoint indication exposed or concealed behind a cover?
- 4. Is a plastic or zinc cast metal cover required?
 - a. Plastic covers order 192-2XX.
 - b. Metal covers order 192-3XX.
- 5. Is the cover finish standard or optional? The standard finish color for plastic and metal covers is Desert Beige.
 - For the white plastic cover option, add suffix code "W" to the cover part number (for example: 192-256W). See Table 2.

2. To order a plastic cover with white finish, add suffix code "W".

Specifications

Control action	See Table 1.
Operating ranges	45 to 85°F (7 to 30°C)
Supply air pressure, maximum	30 psi (207 kPa)
Normal air supply pressure	
Heating	25 psi (172 kPa)
Cooling	18 psi (124 kPa)
Sensitivity adjustment	1 to 4 psi/°F (12 to 50 kPa/°C)
Nominal air consumption (two-pipe)	25 scim (6.8 ml/sec)
Temperature	
Storage temperature	-10 to 140°F (-23 to 60°C)
Ambient operating temperature	40 to 140°F (4 to 60°C)
Temperature response	0.1°F (0.06°C)
Dial graduations	2°F (1°C)
Factory settings	
Calibration @ 72°F (22°C)	7.5 psi (52 kPa)
Sensitivity	2.5 psi/°F (31 kPa/°C)
Limit stop adjustment	45 and 85°F (7 and 30°C)
Standard cover	Cycolac, Desert Beige
Shipping weight	0.7 lbs. (0.3 kg)
Dimensions	See Figure 3.

Accessories

See the following Technical Bulletins for information on accessories:

Technical Bulletin	Document Number
TB 237 Terminal Kits	155-244
TB 214 Adapter Kits	155-231
TB 193 Guard Kit	155-222
TB 241 Test Head Kit	155-255
TB 167 Restrictors	155-213

Dimensions

Figure 3. TH 192 HC Dimensions in Inches (Millimeters).

OperationThe TH 192 HC thermostat combines direct or reverse acting heating control with direct
or reverse acting cooling control. In direct acting control, an increase in temperature
increases the control air pressure and a decrease in temperature decreases the control air
pressure. In reverse acting control, an increase the control air
pressure and a decrease in temperature decreases the control air
pressure and a decrease in temperature decreases the control air

The TH 192 HC provides two separate bimetal elements; one for heating mode control and one for cooling mode control. Each bimetal element operates independently of the other. Using two different supply air pressures accomplishes changeover from heating to cooling modes. A supply pressure of 18 psi (124 kPa) or 25 psi (172 kPa) positions a changeover switch so that a changeover relay operates in the cooling or heating mode, respectively.

Figure 4. TH 192 HC Input/Output Characteristics.

TH 192 HC Thermostat Details

Figure 5. TH 192 HC Thermostat Details.

Thermometer	1.	Use a test thermometer to read the current room temperature.		
Calibration	 Place a screwdriver in the center of the thermometer assembly (Figure 5). Carefully rotate thermometer assembly until the pointer tip indicates the correct room temperature. 			
	NC	DTE: Avoid breathing on or touching the bimetal spiral since this influences the temperature reading.		
Changeover Point Adjustment	The cha	e changeover point is factory set to occur between 19 and 22 psi (131 and 152 kPa). The angeover point can be field adjustable to occur between 14 and 22 psi (96 and 152 kPa).		
 Connect the pressure gauge or manometer to measure the supply pressu thermostat. Use a 30 psi (207 kPa) supply through a positioning switch so can be fully variable. 				
	 Determine the current change over point. Turn the cooling dial so that cooling heating control pressures are different. Then, note the changeover point on t gauge as the supply pressure changes. 			
	3.	Remove the thermometer for access to the changeover adjustment screw. Use a 1/16" Allen Hex Key to adjust the changeover adjustment screw as follows:		
		a. If the changeover is too high, turn off the supply pressure and rotate the changeover adjustment screw clockwise. One turn decreases the changeover point by about 3 psi (20 kPa). Turn on the supply pressure and recheck to verify the new changeover point.		
		b. If the changeover is too low, turn off the supply pressure and rotate the changeover adjustment screw counterclockwise. One turn increases the changeover point by about 3 psi (20 kPa). Turn on the supply pressure and recheck to verify the new changeover point.		

Changeover Point Adjustment, Continued

Figure 6. Changeover Point Adjustment.

Thermostat Calibration

The thermostat is factory calibrated to a control pressure of 7.5 psi (52 kPa) when the setpoint and the ambient temperature are both at 72°F (22°C). The factory sensitivity setting is approximately 2.5 psi/°F (31 kPa/°C). No adjustments are required if these settings are appropriate for the application. If the thermostat has been tampered with, the sensitivity changed, or the thermostat is out of adjustment, use the following steps to re-calibrate the instrument.

Cooling Calibration

Step 1 —

Remove the cover using the 192-632 calibration tool. Verify the room temperature is between 70 and 80°F (21 and 27°C).

Step 2 —

Verify that the supply pressure is 18 psi (124 kPa). Set the cooling dial to room temperature by turning the exposed adjustment knob or using a hex key as shown. Allow the thermostat to stand for about five minutes to adjust to the new setting.

Step 3 —

Moisten the needle and insert the 192-633 test gauge and needle adapter in the test port. Read control pressure.

Step 4 —

If control pressure does not read 7 to 8 psi (48 to 55 kPa), turn calibration screw using 192-632 calibration tool or 1/8" (3.2 mm) wrench until pressure is 7 to 8 psi (48 to 55 kPa). The sensing element is now in calibration and the setpoint can be changed to the desired room temperature.

Step 1 —

If not already done, remove cover using 192-632 calibration tool. Verify room temperature is between 70 and 80°F (21 and 27°C).

Step 2 —

Verify that supply pressure is 25 psi (172 kPa). Set heating dial to room temperature by turning the exposed adjustment knob or using a hex key as shown. Allow thermostat to stand for about five minutes to adjust to the new setting.

Step 3 —

Moisten needle and insert 192-633 test gauge and needle adapter in the test port. Read control pressure.

Step 4 —

If control pressure does not read 7 to 8 psi (48 to 55 kPa), turn calibration screw using 192-632 calibration tool or 1/8" (3.2 mm) wrench until pressure is 7 to 8 psi (48 to 55 kPa). The sensing element is now in calibration and the setpoint can be changed to the desired room temperature.

Troubleshooting

Before troubleshooting thermostat per Table 4, ensure that there is clean dry supply air at 18 psi (124 kPa) for cooling and 25 psi (172 kPa) for heating. Use a test probe gauge and needle adapter to measure the control pressure at the thermostat test port.

The output pressure test port is accessible without removing the thermostat cover through the 8th opening from the top left side for two-pipe thermostats.

	Problem	Check	Cause	Action
	Control pressure stays at	Air supply	Low supply pressure	As required
	approximately zero	Nozzle or flapper	Dirt on nozzle or flapper	Clean nozzle or replace thermostat
		Restrictor	Clogged restrictor	Replace restrictor
		Calibration	Out of calibration	Recalibrate
L B	Control pressure stays at	Nozzle	Clogged nozzle	Clean nozzle or replace thermostat
Тноссен	approximately supply pressure	Calibration	Dirt on either supply or exhaust valve seat	Alternately close and open nozzle by gently pushing down the bimetal
Figure 9. Accessing Output Pressure Test Port.	Excessive air leakage from exhaust port on left side of thermostat	Supply and return line connection	Connections are interchanged or connection to port is incorrect	As required

Table 3. Troubleshooting Guide.

Chassis Tube Remove the thermostat chassis from the wall. The terminal does not have a ball check 1. Connector and valve. **Restrictor Plate** NOTE: You must close off the supply air. For example, use a connector with the supply air Replacement terminal plugged. 2. Remove two Phillips head screws from the connector on the back of the thermostat chassis. Pull the connector out of recess. If necessary, pry the connector loose with a screwdriver, but be careful not to damage the restrictor plate and gasket. 3. Remove the gasket from under the connector. Remove the restrictor. Remove the second gasket from under the restrictor. 4. Use Restrictor Replacement Kit 192-321 to replace the gasket, restrictor, and second gasket. NOTE: The restrictor plate is keyed to ensure proper orientation during installation. 5. Remove filters from the existing connector and insert in the new connector. Or, if filters are dirty, use Restrictor Replacement Kit 192-321 to replace the filters. 6. Use Chassis Tube Connector Replacement Kit 192-525 to replace the connector and mounting screws.

Service Parts

The following chart lists accessory parts and tools available for thermostat service.

Description	Part Number
Dial thermometer (-40 to 140°F, -40 to 60°C) with pocket case	141-0573
Basic pneumatic calibration kit with thermometer, gauge, squeeze bulb, fittings, and case	832-177
Test head kit	832-179
Calibration tools	832-178
Test probe to check pressure with cover on	
Needle probe with 1-1/2" diameter gauge 0 to 30 psig (0 to 200 kPa) and calibration/cover wrench	192-633
Needle probe, no gauge (package of five)	192-759
1-1/2" diameter compound gauge, 0 to 30 psig/0 to 200 kPa, back connected 1/8" NPT male	142-0473
1-1/2" diameter compound gauge, 0 to 30 psig/0 to 200 kPa, bottom connected 1/8" NPT male. Replacement for use with 192-633	142-0476
Chassis tube connector replacement kit with mounting screws (material for 10 thermostats included)	192-525
Restrictor plate replacement kit with filters and gasket (material for 10 thermostats included)	192-321
Plug-in adapters for quick thermostat removal	
Straight, blue (package of 20)	192-485
Straight, white (package of 20)	192-486
Compression ring (package of 100)	141-388
Elbow (provides quick return for wall surface mounting), blue (package of 20)	192-487
Elbow (provides quick return for wall surface mounting), white (package of 20)	192-488
20 scim (5.4 ml/sec) restrictors for 1-pipe systems (package of 5). (1/4 ", 6.4 mm, OD plastic barb unless noted.)	
Brass coupling, 1/8" NPT (1 only).	184-040
Coupling	184-116
Tee	184-113
Pre-piped dual tee for dual 1-pipe systems	184-130
